

Butyryl-L-homoserine lactone

Code No.: **BIA-B1494**

Pack sizes: **5 mg, 25 mg**

Synonyms : C4-HSL, N-Butyryl-L-homoserine lactone, PAI

Specifications

CAS #	: 67605-85-0
Molecular Formula	: C ₈ H ₁₃ NO ₃
Molecular Weight	: 171.2
Source	: Synthetic
Appearance	: White solid
Purity	: >99% by HPLC
Long Term Storage	: -20°C
Solubility	: Soluble in ethanol, methanol, DMF or DMSO. Poor water solubility.

Application Notes

Butyryl-L-homoserine lactone is a short acylhomoserine lactone isolated from *Pseudomonas aeruginosa* in 1995 and demonstrated to be a quorum sensing modulator in biofilms. Acylhomoserine lactones have been detected in hundreds of bacterial species and, while the homologues vary between species and strains, the homoserine lactones are the major chemical modulators of within and between cell communication and regulation. The most significant variable defining the function of the homoserine lactone is the length of the acyl chain, with shorter chains displaying opposing actions to the longer chains.
