

## Capreomycin

Code No.: **BIA-C1454**

Pack sizes: **5 mg, 25 mg**

Synonyms : Capromycin, Caprolin, Capastat, Capostatin, L 29275

## Specifications

CAS #	: 11003-38-6
Molecular Formula	: <b>C<sub>25</sub>H<sub>44</sub>N<sub>14</sub>O<sub>7</sub> (for IB)</b>
Molecular Weight	: <b>652.7</b>
Source	: <b><i>Streptomyces</i> sp.</b>
Appearance	: <b>White solid</b>
Purity	: <b>&gt;99% by HPLC</b>
Long Term Storage	: <b>-20°C</b>
Solubility	: <b>Soluble in ethanol, methanol, DMF or DMSO. Good water solubility.</b>

## Application Notes

Capreomycin is a complex of cyclic pentopeptides isolated from *Streptomyces capreolus*, first reported in 1962. The complex has two major components, IA and IB, with an exocyclic lysine residue and two minor delysinyll components, IIA and IIB. Capreomycin is a potent antibiotic with activity against mycobacteria, Gram positive and Gram negative organisms. Capreomycin acts by binding to the 23S ribosomal subunit, disrupting protein synthesis.
