

Milbemycin A4 oxime

Code No.: **BIA-M1532**

Pack sizes: **1 mg, 5 mg**

Synonyms : 5-Oxomilbemycin A4 oxime

Specifications

CAS #	: 93074-04-5
Molecular Formula	: C ₃₂ H ₄₅ NO ₇
Molecular Weight	: 555.7
Source	: Semi-synthetic
Appearance	: White solid
Purity	: >99% by HPLC
Long Term Storage	: -20°C
Solubility	: Soluble in ethanol, methanol, DMF or DMSO. Poor water solubility.

Application Notes

Milbemycin A4 oxime is a semi-synthetic macrocyclic lactone prepared by the oxidation and oximation of milbemycin A4. Milbemycin A4 oxime is the major component (~70%) in the commercial product, milbemycin oxime, marketed for endo- and exo-parasite infections. Like the other milbemycin/ivermectins, milbemycin A4 oxime acts by opening glutamate sensitive chloride channels in neurons of invertebrates, leading to paralysis by hyperpolarisation of these cells and signal transfer blocking.
