

Parvodicin complex

Code No.: **BIA-P1372**

Pack sizes: **5 mg, 25 mg**

Synonyms : A 40926 complex

Specifications

CAS #	: 187888-13-7
Molecular Formula	: C₈₃H₈₈Cl₂N₈O₂₉ (for C1)
Molecular Weight	: 1732.5
Source	: <i>Actinomadura parvosata</i>
Appearance	: Fawn to light tan solid
Purity	: >95% by HPLC
Long Term Storage	: -20°C
Solubility	: Soluble in ethanol, methanol, DMF or DMSO. Good water solubility.

Application Notes

Parvodicin complex is a family of glycopeptides with potent antibiotic activity, isolated from *Actinomadura parvosata*. Structurally the parvodicins share a common cyclic peptide core with ristocetin. The analogues within the complex vary in the fatty acid substitution on the aminosugar. Like other glycopeptides in this class, parvodicin complex inhibits cell wall formation by binding to D-alanine-D-alanine residues. Parvodicin complex is a precursor to the synthetic glycopeptide, dalbavancin.
