

Sporidesmolide I

Code No.: **BIA-S1603**

Pack sizes: **0.5 mg, 2.5 mg**

Synonyms :

Specifications

| | |
|-------------------|---|
| CAS # | : 2900-38-1 |
| Molecular Formula | : C ₃₃ H ₅₈ N ₄ O ₈ |
| Molecular Weight | : 638.4 |
| Source | : <i>Pithomyces</i> sp. |
| Appearance | : Off white to light tan solid |
| Purity | : >95% by HPLC |
| Long Term Storage | : -20°C |
| Solubility | : Soluble in ethanol, methanol, DMF or DMSO. |

Application Notes

Sporidesmolide I is the most polar of N-methyl analogues belonging to the hexadepsipeptide sporidesmolide complex. Biosynthesis of sporidesmolide I involves the use of D- and L- amino acids utilizing two leucine and four valine sub-units, where two of the valines are converted to the corresponding valic acid. The biological activity of sporidesmolide I has not been extensively investigated.
