

Chrysomycin B

Code: **BIA-C1018**

Pack sizes: **0.5 mg, 2.5 mg**

Synonyms : **Chrysomycin M, Virenomycin M, Albacarcin M**

Specifications

CAS # : **83852-56-6**
Molecular Formula : **C₂₇H₂₈O₉**
Molecular Weight : **496.5**
Source : ***Streptomyces* sp. MST-AS5361**
Appearance : **Yellow Crystals**
Purity : **> 98% by HPLC**
Long Term Storage : **+4°C**
Solubility : **Soluble in DMF or DMSO. Moderately soluble in methanol or ethanol.**

Application Notes

Chrysomycin B is a minor analogue in a complex of C-glycoside antitumor actives isolated from *Streptomyces*. Chrysomycin B, containing a methyl group in the 8-position, is less active than its vinyl analogue (Chrysomycin A), albeit still a potent antitumor active and an inhibitor of the catalytic activity of human topoisomerase II. More recent research on related metabolites, the gilvocarcins, suggests that chrysomycins may act as photoactivated crosslinkers of DNA to histones.
