

Fumagillin

Code: **BIA-F1256**

Pack sizes: **0.5 mg, 2.5 mg**

Synonyms : **Fumadil B, NSC 9168, U 5762**

Specifications

CAS # : **23110-15-8**
Molecular Formula : **C₂₆H₃₄O₇**
Molecular Weight : **458.6**
Source : ***Aspergillus fumigatus***
Appearance : **Yellow powder**
Purity : **>99% by HPLC**
Storage : **-20°C**
Solubility : **Soluble in ethanol, methanol, DMF or DMSO. Poor water solubility.**

Application Notes

Fumagillin is a polyene mycotoxin isolated from *Aspergillus fumigatus* in 1951 as a potent antiprotozoan active for the treatment of amoebiasis. More recently, fumagillin has been shown to inhibit endothelial cell proliferation and angiogenesis by inhibition of methionine aminopeptidase-2 (MetAP-2).
