Application Notes

Milbemycins are a complex family of macrocyclic lactones containing a highly characteristic spiroketal group produced by *Streptomyces hygroscopicus* subsp. *aureolacrimosus*. Milbemycin A3 is a major member of a group of analogues containing a 25-methyl substituent. Milbemycin A3 is a highly selective and potent nematocide and insecticide. Like the closely related avermectins, milbemycins are thought to act on chloride-gated ion channels.
